

Firebird Embedded C# Code Example

5-Dec-2019

```
//-----  
static private bool boCreateDatabase(string stPathFilename,  
                                     string stUserID,  
                                     string stPassword)  
{  
    bool boErrorFlag = false;  
    string stConn = new FbConnectionStringBuilder {  
        Database = stPathFilename,  
        UserID = stUserID,  
        Password = stPassword,  
        ServerType = FbServerType.Embedded,  
        ClientLibrary = @"(path)\fbclient.dll"  
    }.ToString();  
    try {  
        FbConnection.CreateDatabase(stConn,  
                                    pageSize: 16384,  
                                    forcedWrites: true,  
                                    overwrite: false);  
    }  
    catch (Exception ex) {  
        boErrorFlag = true;  
        MessageBox.Show(ex.Message);  
    }  
    return boErrorFlag;  
} //boCreateDatabase  
//-----
```
